

Fire Prevention Tips

The CA Department of Forestry and Fire Protection have officially declared the start of Fire Season. Below is a list of tips for home and business owners on how to help prevent damage to your property and assets during this time.

- Clear up all debris (leaves, twigs, etc) around the home and in the yard
- Review all insurance documents and talk to your insurance company to make sure adequate fire coverage is in place
- Install/buy a fire-proof safe and keep valuables and documents (like insurance papers) inside
- Make a home-video of your house and property to document all furniture, electronics, valuables, etc. and keep it in a fire-proof safe. This is an excellent way to provide your insurance company with documentation of your property and valuables
- Check that all fire protection systems (sprinklers, fire detectors, etc) are working properly
- Create a “disaster plan” and a “disaster kit” so that you are prepared with phone numbers of contacts, water, food, change of clothes, etc. if a fire should occur
